Description

Type	Text	Date updated
Development	Vilje is a field in the central part of the North Sea, 20 kilometres northeast of the Alvheim field. The water depth is 120 metres. Vilje was discovered in 2003, and the plan for development for operation (PDO) was approved in 2005. The field is developed with three horizontal subsea wells tied-back to the Alvheim production, storage and offloading vessel (FPSO). The production started in 2008. The Skogul field is tied-back to the Alvheim FPSO via the Vilje template.	13.12.2023
Reservoir	Vilje produces oil from turbidite sandstone of Paleocene age in the Heimdal Formation. The reservoir is in a fan system at a depth of 2150 metres and has good quality.	09.12.2023
Recovery strategy	The field is produced by natural water drive from the regional underlying Heimdal aquifer.	28.02.2023
Transport	The well stream is routed by pipeline to the Alvheim FPSO, where the oil is offloaded to shuttle tankers. The gas is transported by pipeline from Alvheim to the Scottish Area Gas Evacuation (SAGE) pipeline in the UK sector.	28.02.2023
Status	The recoverable volume estimates are significantly higher than in the PDO. However, production from the field is steadily declining due to increasing water cut.	28.02.2023

Investments (expected)

The operators future investments related to the reservers from 2023 [mill NOK 2023-kroner]. The stated investment estimate has not been corrected for possible investment sharing.	1
