Description

Type	Text	Date updated
Development	Statfjord Øst is a field in the Tampen area in the North Sea, seven kilometres northeast of the Statfjord field. The water depth is 150-190 metres. Statfjord Øst was discovered in 1976, and the plan for development and operation (PDO) was approved in 1990. The field has been developed with two subsea production templates and one water injection template, tied-back to the Statfjord C platform. In addition, two production wells have been drilled from Statfjord C. The production started in 1994.	14.12.2023
Reservoir	Statfjord Øst produces oil from Middle Jurassic sandstone in the Brent Group. The reservoir is at a depth of 2400 metres and has good quality.	14.12.2023
Recovery strategy	The field was originally produced with water injection but is now produced by pressure depletion.	28.02.2023
Transport	The well stream is transported in two pipelines to the Statfjord C facility for processing, storage and export. Statfjord Øst, Statfjord Nord and Sygna have a shared process module on Statfjord C. Oil is loaded onto tankers and gas is exported through Tampen Link and the Far North Liquids and Gas System (FLAGS) pipeline to the UK.	28.02.2023

Status	The field is affected by pressure depletion due to depressurisation of the Statfjord field. The lifetime extension of the Statfjord C facility opens for additional opportunities for the field. The main planned activity for Statfjord Øst is related to the gas lift project, which includes providing a gas lift solution for both subsea production templates and drilling of five new wells capable of producing with gas lift. The first well came on stream in August 2023.	14.12.2023

Investments (expected)

The operators future investments related to the reservers from 2023 [mill NOK 2023-kroner]. The stated investment estimate has not been corrected for possible investment sharing.	4092
